

We are qualified partner in the automotive- and aerospace industry.
Development, serial processing, complete manufacture of
components, plant assembly and maintenance, sandblasting services.

Industrial services and production support - Machining, assembly, inspection and maintenance

- Industrial mould heating (system installation and maintenance)
- Tooling (development and production)
- Assembly and pre-assembly of components
- 24-hour service in production support
- Material specific sandblasting (aluminum, stainless steel)

Production of prototypes and serial processing of car components for automotive companies and suppliers

- Serial production and serial processing of various car parts
- Special parts production
- Spare parts
- Sheet metal conversion
- Heat protection components)

Development and manufacturing of lightweight production methods in aeronautical engineering

- Moulds and tool manufacturing
- CFRP-Preform and CFRP-PrePreg forming technology
- Light metal construction and plastic processing
- Solutions in production technology
- Production verification

Production of sand cast, injection molded, stamped, deep-drawn and GRP moulded parts, etc. to complete manufacture of components

- Laser, turning, milling, drilling and stamping work
- Wig, gas-shielded and spot welding
- Locksmithery

Material-specific sandblasting for gentle cleaning and processing of serial parts

- Sandblasting cabins exclusively used for one type of material. This avoids undesirable surface contamination with foreign materials
- We also meet quality requirements for the automotive and aerospace industry
- The existing number of cabins will be raised if necessary (for new types of material)

Production according to original parts or technical drawings with modern equipment and computer technology

- Logos and emblems, etc. according to original or individual design
- Digitizing of your originals and drawings into CAD (2D/3D)
- Tool development in CAD (2D/3D)
